# Carlisle - Your Source of Savings!

With today's rising energy costs, easy solutions can be hard to find. Drive system performance is at the mercy of its weakest link. Industry has made intensive efforts to improve the efficiency and productivity of motors and driven equipment. However, relatively little attention is given to the belt drive connecting these components.

Carlisle energy efficient raw edge and synchronous belts improve system performance. Payback is significant and begins immediately! The greater the number of drives and the higher the horsepower, the more you save!

For example, install Gold Ribbon Cog Belts on your existing V-Belt drives to realize immediate energy savings without changing sheaves or modifying your drives. Conventional V-Belts deteriorate to a nominal efficiency of 93 percent. Carlisle Gold Ribbon Cog Belts maintain a 95% efficiency rating. Gold Ribbon's higher horsepower capacity and longer life also reduces maintenance intervals and down time.

Use PowerMiser software to calculate the savings you'll enjoy using Carlisle belts.
